## Water Quality Guidelines (WQG) Prescribed in DENR Administrative Order No. 2016-08

### pH

#### Legend:

-  Conformed with WQG for Classes A and B (6.5 to 8.5)
-  Conformed with WQG for Class C (6.5 to 9.0)
-  Conformed with WQG for Class D (6.0 to 9.0)
-  Failed the WQG for Classes A to D (less than 6.0 and more than 9.0)

### BOD

-  Conformed with WQG for Class A (conc. of less than and up to 3 mg/L)
-  Conformed with WQG for Class B (conc. of more than 3 and up to 5 mg/L)
-  Conformed with WQG for Class C (conc. of more than 5 mg/L up to 7 mg/L)
-  Conformed with WQG for Class D (conc. of more than 7 mg/L up to 15 mg/L)
-  Failed the WQG for Classes A to D (more than 15 mg/L)

### DO

-  Conformed with WQG for Classes A, B and C (conc. of equal and more than 5 mg/L)
-  Conformed with WQG for Class D (conc. of more than 2 mg/L up to less than 5 mg/L)
-  Failed the WQG for Classes A to D (less than 2 mg/L)

### Chloride

-  Conformed with WQG for Classes A and B (conc. of less than and up to 250 mg/L)
-  Conformed with WQG for Class C (conc. of more than 250 mg/L and up to 350 mg/L)
-  Conformed with WQG for Class D (conc. of more than 350 mg/L and up to 400 mg/L)
-  Failed the WQG for Classes A to D (more than 400 mg/L)

### TSS

-  Conformed with WQG for Class A (conc. of less than and up to 50 mg/L)
-  Conformed with WQG for Class B (conc. of more than 50 mg/L and up to 65 mg/L)
-  Conformed with WQG for Class B (conc. of more than 65 mg/L and up to 80 mg/L)
-  Conformed with WQG for Class B (conc. of more than 80 mg/L and up to 110 mg/L)
-  Failed the WQG for Classes A to D (more than 110 mg/L)

### Oil and Grease

-  Conformed with WQG for Classes A and B (conc. of less than and up to 1 mg/L)
-  Conformed with WQG for Class C (conc. of more than 1 mg/L and up to 2 mg/L)
-  Conformed with WQG for Class D (conc. of more than 2 mg/L and up to 5 mg/L)
-  Failed the WQG for Classes A to D (more than 5 mg/L)

### Nitrate

-  Conformed with WQG for Classes A, B and C (conc. of less than and up to 7 mg/L)
-  Conformed with WQG for Class D (conc. of more than 7 mg/L and up to 15 mg/L)
-  Failed the WQG for Classes A to D (more than 15 mg/L)

## Water Quality Guidelines (WQG) Prescribed in DENR Administrative Order No. 2021-19

### Ammonia

-  Conformed with WQG for Classes A, B and C (conc. of less than and up to 0.06 mg/L)
-  Conformed with WQG for Class D (conc. of more than 0.06 mg/L and up to 0.3 mg/L)
-  Failed the WQG for Classes A to D (more than 0.3 mg/L)

### Phosphate

-  Conformed with WQG for Classes A, B and C (conc. of less than and up to 0.025 mg/L)
-  Conformed with WQG for Class D (conc. of more than 0.025 mg/L and up to 0.05 mg/L)
-  Failed the WQG for Classes A to D (more than 0.05 mg/L)

### Fecal Coliform

-  Conformed with WQG for Class A (< 50 MPN/ 100 mL)
-  Conformed with WQG for Class B (more than 50 MPN/ 100 mL and up to 100 MPN/ 100 mL)
-  Conformed with WQG for Class C (more than 100 MPN/ 100 mL and up to 200 MPN/ 100 mL)
-  Conformed with WQG for Class D (more than 200 MPN/ 100 mL and up to 400 MPN/ 100 mL)
-  Failed the WQG for Classes A to D (more than 400 MPN/ 100 mL)

9

## FINDINGS FOR THE 4<sup>th</sup> QUARTER 2024

Note: For the tributary rivers, no water samples were collected in the following stations:

- Stns. 6, 7, 8, 8M, 8U, 9, 10, 11, 12, 13, 14, 15 – due to Typhoon Kristine
- Stn. 1 (Marikina River) – on-going bridge construction
- Stn. 29 (Saran River) – water level too shallow

### Biochemical Oxygen Demand (BOD)

#### *Laguna Lake*

- All lake monitoring stations complied with the DENR Water Quality Guideline (WQG) set for Classes A to C from October to December. Out of the fifteen (15) monitoring stations, five (5) were consistently assessed as Class A, specifically: Stns. II, V, VIII, XIII, and XVI.
- The lowest BOD concentration at 2 mg/L which indicates good water quality was observed in several stations in October and November. The highest concentration at 5 mg/L was noted in Stn. XXII (Jala-jala) in December.

#### *Tributary Rivers*

- The monthly BOD concentrations ranged from <1 mg/L to 356 mg/L. The highest was observed in Stn. 3 (Buli Creek) in October while the lowest was consistently observed in Stn. 17 (Pangil – Downstream) from October to December.
- For this quarter, the following stations were consecutively assessed as:
  - Class A – ten (10) stations, specifically: Stns. 16, 17, 17U, 18, 19, 19U, 21, 22A, 22B, and 22C
  - Class D – Stns. 24 (Morong River – Downstream) and 26 (Sapang Baho – Cainta)
  - Failed the WQG from Classes A to D – four (4) stations, namely: Stns. 2 (Bagumbayan River), 3 (Buli Creek), 5 (Tunasan River – Downstream), and 30 (Binangonan River).

### Dissolved Oxygen (DO)

#### *Laguna Lake*

- For the 4<sup>th</sup> Quarter of 2024, all fifteen (15) lake monitoring stations consistently conformed with the WQG for Class A.
- The concentrations ranged from 6 mg/L to 9 mg/L indicating good water condition in terms of DO.

### ***Tributary Rivers***

- For three consecutive months, the following stations were consistently assessed as:
  - Class A – ten (10) stations: Stns. 16, 17, 17U, 18, 19, 19U, 22A, 22B, 22C, and 28.
  - Class D – Stns. 21 (Pilillia River) and 24U (Morong River – Upstream)
  - Failed the WQG from Classes A to D – six (6) stations, specifically: Stns. 2, 3, 4, 5, 26, and 30
- Other stations were sporadically assessed at different classes where DO concentrations ranged from <0.1 mg/L to 8 mg/L. The highest concentrations were noted in several stations from October to December but was consistently observed in Stns. 17U (Pangil River – Upstream), 19U (Sta. Maria River – Upstream), and 22C (Tanay River – Daranak Falls (Upstream)). The higher the DO, the better is the water quality.

### **Fecal Coliform**

#### ***Laguna Lake***

- All lake monitoring stations conformed with Classes A, B and C except for Stn. XV (San Pedro – West Bay) which failed to conform with the WQG classes A to D in October, but was assessed at Class D in November and December.
- Out of (15) stations, five (5) displayed good water quality condition in terms of fecal coliform counts and were consistently assessed at Class A, specifically: Stns. II, IV, VIII, XVII, and XVIII.
- The fecal coliform counts expressed in geomean ranged from 18 MPN/100mL to 818 MPN/100mL wherein the highest was at Stn. XV (San Pedro – West Bay) and the lowest was observed at Stn. XXII (Jala-jala) in October and Stn. IV (Central Bay) in October and November.

### ***Tributary Rivers***

- All thirty-six (36) tributary river stations failed to conform with the WQG set for Classes A to D for fecal coliform counts.
- The fecal coliform counts expressed in geometric mean ranged from 696 MPN/100mL to 113,490,088 MPN/100mL. The highest geomean count was recorded at Stn. 10 (San Cristobal River) in November which was recorded in October. On the other hand, the lowest was noted at Stn. 17U (Pangil River – Upstream) in November, which also had the lowest counts for three consecutive months.

94

## Chloride

### *Laguna Lake*

- The chloride concentrations for this quarter conformed with the WQG for Classes A, B and C which ranged from 12 mg/L to 326 mg/L. The lowest was noted at Stn. XXIII (Lumban) in November while the highest was at Stn. XVII (Fish Sanctuary – Central Bay) in October.
- There are three (3) lake stations that consistently met the WQG for Class A standards from October to December, namely: Stns. II (East Bay), XVIII (Pagsanjan – East Bay), and XXIII (Lumban).

## pH

### *Laguna Lake*

- All monthly lake monitoring stations conformed with the WQG set for Class A except for Stn. XXII (Jala-jala) in December which was assessed at Class C but still complied with the required classification for Laguna Lake.
- The pH levels for this quarter ranged from 7.1 to 8.6, with the lowest value recorded at Stn. XXIII (Lumban) in October and November and the highest in Stn. XXII (Jala-Jala) in December.

### *Tributary Rivers*

- All monitored tributary rivers conformed with WQG for Class A for the whole quarter except for Stn. 18 (Siniloan River) in November at a pH level of 6.2 which fell within the range for Class D waters, making it the lowest recorded value for pH.
- On the other hand, 8.3 was the highest pH level and was noted at Stn. 8M (Sta. Rosa – Midstream) in December.

## Ammonia

### *Laguna Lake*

- The monthly concentrations for ammonia ranged from 0.009 mg/L to 0.3 mg/L. The lowest was assessed at Class A in Stn. XXI (Cardona) in November. Conversely, the highest concentration was at Class D recorded at Stn. XV (San Pedro – West Bay) in October and Stn. I (Central West Bay) in December.
- In October, all lake monitoring stations were determined to be Class D.
- In November, nine (9) stations were evaluated as Class A, specifically: Stns. II, V, VIII, XIII, XV, XVI, XIX, XX, and XXI; while the rest of the stations were Class D.

94

- Only two (2) stations were conformed with Class A in December, namely: Stns. XVII (Fish Sanctuary – Central Bay) and XXIII (Lumban). The rest of the stations were assessed at Class D.

### ***Tributary Rivers***

- Out of all stations with samples collected, the following were consecutively assessed from October to December as:
  - Class A – Stn. 22B (Tanay River – Midstream)
  - Class D – Stns. 18 (Siniloan River) and 22A (Pililla River)
  - Failed the WQG for Classes A to D – nine (9) stations, specifically: Stns. 2, 3, 4, 5, 24, 24U, 25, 26, and 30.
- The ammonia levels ranged from <0.002 mg/L to 24 mg/L wherein the lowest was at Stns. 19U (Sta. Maria – Upstream) and 22C (Tanay River – Daranak Falls) in October and the highest at Stn. 3 (Buli Creek) in October.

## **Nitrate**

### ***Laguna Lake***

- All lake monitoring stations were observed to conform with the WQG set for Class A waters which ranged from <0.1 mg/L to 0.8 mg/L wherein the highest was recorded at Stn. XX (GEMS) in November.

### ***Tributary Rivers***

- All tributary river stations conformed with the WQG set for Class A waters. The monthly concentrations ranged from <0.1 mg/L to 4 mg/L. The highest was noted at Stn. 11 (San Juan River) in November while the lowest was observed at several stations.

## **Inorganic Phosphate**

### ***Laguna Lake***

- The lowest inorganic phosphate concentration at <0.01 mg/L and assessed at Class A was recorded in Stns. XXI (Cardona) in October and XXII (Jala-jala) in December. Conversely, the highest concentration was at 0.079 mg/L which failed to conform with the WQG for Classes A to D and was noted in Stns. XV (San Pedro - West Bay) in October and V (Northern West Bay) in December.

- For this quarter, only Stn. IV (Central Bay) was consistently assessed at Class A while the following lake stations were noted to have failed to conform with A, B and C, namely: Stns. II, XIII, XV, XVI, XVIII, XIX, XX, and XXIII.

### ***Tributary Rivers***

- In October and December, all tributary river stations failed the WQG for Classes A to D except for Stn. 22C (Tanay River – Daranak Falls) in October.
- In November, almost all of the monitored stations failed the WQG for Classes A to D except for the following that were assessed as:
  - Class A – Stn. 17 (Pangil River – Downstream)
  - Class D – five (5) stations, specifically: Stns. 16, 17U, 18, 19, and 19U.
- For this quarter, the phosphate concentrations ranged from 0.018 mg/L to 2.8 mg/L. The highest was noted at Stn. 2 (Bagumbayan River) in October, while the lowest was at Stn. 17 (Pangil River – Downstream) in November.

### **Total Suspended Solids (TSS)**

#### ***Laguna Lake***

- All lake monitoring stations conformed with Class A for all months except for Stn. XIII (Taytay) in November and Stn. XVI (Sta. Rosa – West Bay) in December which were assessed at Class B.
- The TSS concentrations ranged from 10 mg/L to 65 mg/L. The lowest was noted at Stn. XXIII (Lumban) in November while the highest was at Stn. XVI (Sta. Rosa – West Bay) in December.

### **Summary/Recommendations:**

For the Laguna Lake, as based on the average results from October to November 2024, Stn. XXI (Cardona) exhibited the best water quality among all fifteen (15) Laguna lake stations as it conformed with the standards set for Classes A, B, and C for all parameters. Conversely, the worst station was determined to be Stn. XV (San Pedro – West Bay) since it failed to meet the WQG set for fecal coliform and inorganic phosphate, and was assessed at Class D for ammonia.

For the tributary rivers, out of the thirty-six (36) monitored stations, Stns. 17 (Pangil River – Downstream) and 17U (Pangil River – Upstream) were the stations that had the most passing parameters. Both stations only failed the WQG for fecal coliform and were the only stations that were assessed at Class D for inorganic phosphate, while the rest of the stations failed. On the other hand, the poorest water quality was observed in multiple stations near the West Bay area

of the lake and these were Stns. 2, 3, 4, 5, 6, 7, 8, 9, 10, and 30. These stations failed to meet the WQG for all classes for BOD, DO, fecal, coliform, ammonia, and inorganic phosphate.

All throughout the year, sampling stations located near the West Bay area, which has high population density, showed poor water quality in several parameters. Various factors may have contributed to this bad condition, including anthropogenic activities near the lake and rivers, as well as the continuous discharge of untreated domestic and industrial wastes into the bodies of water. Thus, the following measures are recommended to prevent further deterioration of Laguna lake and its tributaries:

- 1) Strict implementation of environmental laws and ordinances
  - Conduct regular inspections to ensure no overflow from septic tanks
  - Penalizing illegal disposal of solid wastes and industrial wastewaters directly into the lake and rivers.
- 2) Implement proactive environmental strategies with the active participation and involvement of LGUs, communities and stakeholders
  - Conduct IEC campaigns and clean-up drives to encourage collective action in safeguarding the environment.
- 3) Adopt a comprehensive plan on proper solid waste management such as:
  - Put up trash traps along shorelines and river banks to control and stop the solid wastes from getting in the lake and rivers; and
  - Devise marked garbage bins (Nabubulok/Hindi Nabubulok) in accessible and within reach areas.
